

B Detailed computational results

In this section we present detailed computational results. In Tables 18-137 we report, for every problem instance considered in our campaign, the dual bound (under column **DB**), primal bound (under column **PB**), relative gap (under column **GAP**), and CPU time in seconds (under column **CPU**). For the solvers **CN24** and **NAIVE** in addition we report the total number of linear pieces (under column **NP**). For our solver, in addition we report the number of iterations of the main loop of our method (under column **NIT**). We also report the total number of problems solved and the shifted geometric means of the computing times, and the gaps, in each table.
